

ROTATING DEVICE FOR HOLLOW BODIES

Built entirely of steel, it allows to fix the molds on double permanent magnets.

Mechanical clutch on movement, for accident prevention.

Simultaneous use of four operating stations.

The speed control is done by inverter and the transmission is equipped with a mechanical safety clutch.

TECHNICAL CHARACTERISTICS:

- Control via pedal
- Speed regulated by inverter
- Motor for moulding vibration
- Volt. 230 – Hz 50 – KW 0,4 single phase (special voltages on request)
- Dimensions mm 500x700xh. 1250
